

Ohio Department of Health Seasonal Influenza Activity Summary MMWR Week 48 November 29th – December 5th, 2015

Current Influenza Activity:

Ohio Data

Current Ohio Activity Level (Geographic Spread) - Sporadic: Small numbers of laboratory-confirmed influenza cases or a single laboratory-confirmed influenza outbreak has been reported, but there is no increase in cases of ILI.

During MMWR Week 48, public health surveillance data sources indicate minimal intensity for influenza-like illness (ILI) in outpatient settings reported by Ohio's sentinel providers. The percentage of emergency department visits with patients exhibiting constitutional symptoms **are below** baseline levels statewide; fever and ILI specified ED visits **are also below** baseline levels. There were 11 influenza-associated hospitalizations reported.

Ohio Weekly Influenza-associated Hospitalizations by Ohio Public Health Region

Central	2
East Central	1
Northeast	4
Northwest	3
Southeast	1
Southwest	0
West Central	0
Total	11

Ohio Influenza Activity Summary Dashboard:

Data Source	Current week value	Percent Change from last week ¹	# of weeks ²	Trend Chart ³
Influenza-like Illness (ILI) Outpatient Data (ILINet Sentinel Provider Visits)	0.53%	-24.29%	↓ 1	
Thermometer Sales (National Retail Data Monitor)	1387	19.26%	↑ 1	
Fever and ILI Specified ED Visits (EpiCenter)	1.72%	0.58%	↑ 3	
Constitutional ED Visits (EpiCenter)	8.26%	1.47%	↑ 3	
Confirmed Influenza-associated Hospitalizations (Ohio Disease Reporting System)	11	-15.38%	↓ 1	
Outpatient Medical Claims Data⁴	0.35%	9.38%	↑ 3	

¹Interpret percent changes with caution. Large variability may be exhibited in data sources with low weekly values.

²Number of weeks that the % change is increasing or decreasing.

³Black lines represent current week's data; red lines represent baseline averages.

⁴Medical Claims Data provided by athenahealth®

HHS Regional Data: During week 47 (November 22nd - November 28th, 2015), the proportion of outpatient visits for ILI in Region 5 (Ohio is in Region 5) was 1.4%, which is below the regional baseline of 1.9%. Ohio, Michigan, Pennsylvania, Indiana, Kentucky, and West Virginia report Sporadic Activity.

National Data:

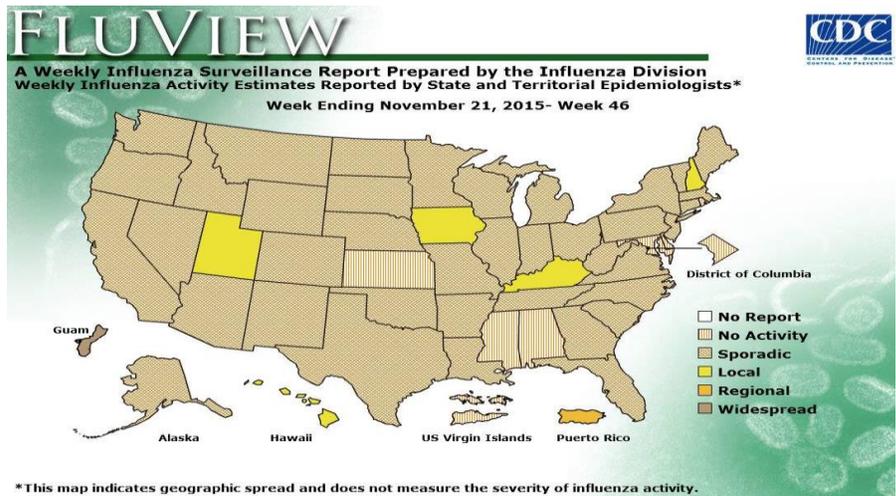

During week 47 (November 22nd - November 28th, 2015), most U.S. states reported Low to Minimal influenza activity. Two states reported Moderate activity. The proportion of outpatient visits for ILI was 1.9%, which is below the national baseline of 2.1%. Three HHS regions reported ILI levels below their region-specific baseline levels.

Influenza Virus Characterization:

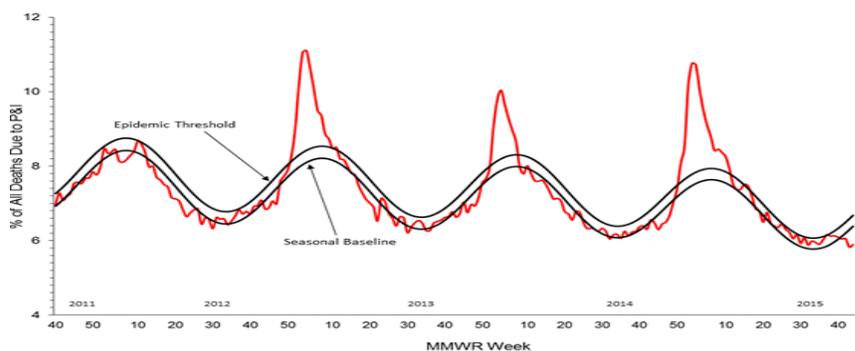

CDC has characterized 62 influenza viruses [18 A (H1N1)pdm09, 43 A (H3N2), and 1 influenza B viruses] collected by U.S. laboratories since October 1, 2015.

CDC has characterized 359 influenza viruses [17 A (H1N1)pdm09, 271 A (H3N2), and 71 influenza B virus] collected by U.S. laboratories from May 24-September 30, 2015.

To date, all but one of the viruses that have been characterized have been found to be genetically similar to the viruses included in the 2015-2016 influenza vaccine

Pneumonia and Influenza Mortality from the National Center for Health Statistics Mortality Surveillance System
Data through the week ending November 7, 2015, as of November 25, 2015

State Surveillance Data:

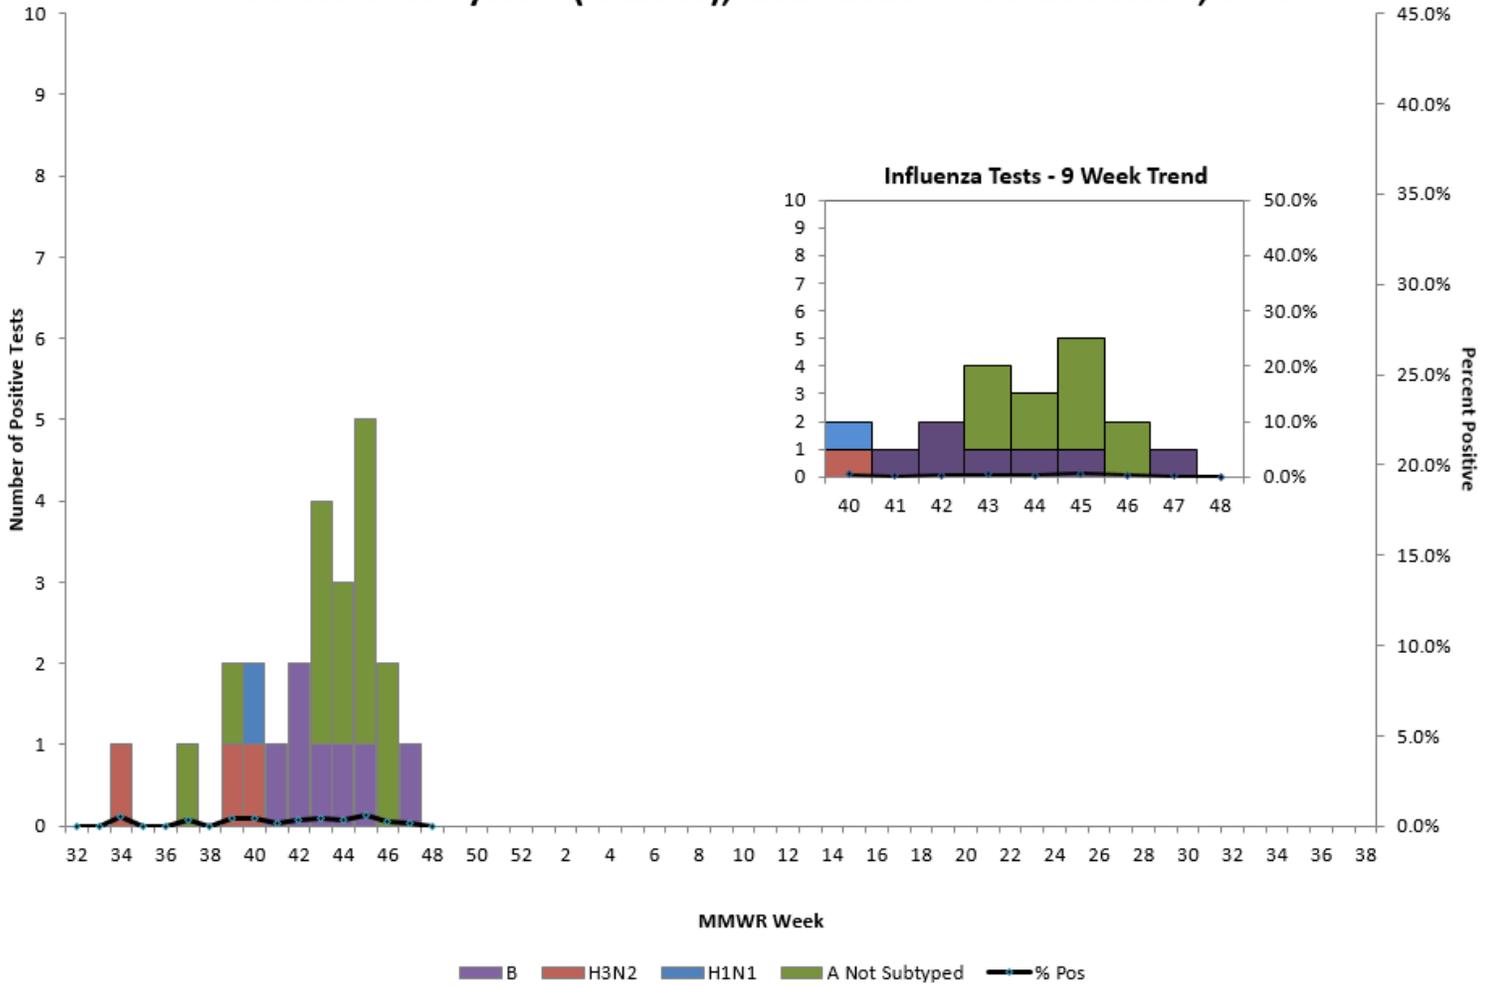

- **ODH lab** has reported **64** influenza tests from specimens submitted from various submitters. 2015-2016 influenza season results: **(2) A/pdmH1N1; (0) A/H3N2; (1) Influenza B; (61) Negative** (through 12/5/15).
- The **National Respiratory and Enteric Virus Surveillance System (NREVSS)** has reported **6,109** influenza tests performed at participating facilities. 2015-2016 influenza season positive results: **(1) H1N1, (1) A/H3N2, (11) Flu A Not Subtyped, and (7) Flu B** (through 12/5/15).
- No **pediatric influenza-associated mortalities** have been reported during the 2015-2016 season (through 12/5/15).
- No **novel influenza A virus infections** have been reported during the 2015-2016 season (through 12/5/15).
- Incidence of confirmed **influenza-associated hospitalizations** in 2015-2016 season = **132** (through 12/5/15).

National activity levels and more information can be found at the following CDC pages:

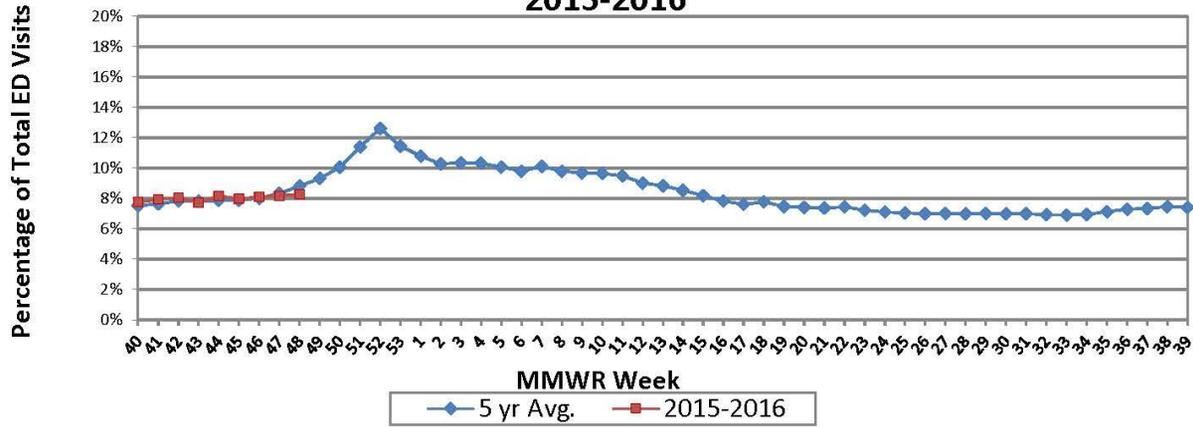

- <http://www.cdc.gov/flu/weekly/usmap.htm>
- <http://www.cdc.gov/flu/>

If you have any further questions or comments about surveillance for seasonal influenza for the State of Ohio, please contact the Public Health Informatics and Vaccine Preventable Disease Epidemiology Unit at SMED@odh.ohio.gov or call (614) 995-5599.

Sources of Influenza Surveillance Data

- **National Retail Data Monitor (NRDM)-OTC Drug Purchases:** The NRDM collects over-the-counter (OTC) drug sales information from approximately 1,420 Ohio chain drug stores and grocery stores. For influenza surveillance, thermometer and adult cold relief sales are monitored on a weekly basis.
- **Emergency Department Visits (EpiCenter):** EpiCenter collects emergency department chief complaint data from 180 hospitals and urgent care facilities across Ohio in real time and classifies them into symptom and syndrome categories. Chief complaints from the constitutional syndrome category and the fever + ILI symptoms classifier are analyzed for influenza surveillance.
- **Sentinel Providers (ILINet):** Sentinel providers, through the US Influenza-like Illness Surveillance Network (ILINet), collect outpatient influenza-like illness (ILI) data. ILI is defined as a fever (≥ 100 F), **and** cough and/or sore throat without another known cause. Providers report the total number of patients seen and the number of patients with ILI by age group on a weekly basis. Sentinel providers also submit specimens for influenza testing to the ODH laboratory throughout the influenza season. There are 88 sentinel providers enrolled in Ohio for the 2013-2014 season.
- **ODH Laboratory Surveillance:** The Ohio Department of Health Laboratory reports the number of specimens that test positive for influenza each week. Generally, specimens are submitted by sentinel provider participants. A subset of the positive specimens is sent to CDC for further testing during the season.
- **Influenza-associated Hospitalizations (ODRS):** Influenza-associated hospitalizations are reported to ODH from local health departments and hospitals by direct entry into the Ohio Disease Reporting System (ODRS). Hospitalizations can be used as an indicator of the severity of illness during a particular influenza season. This condition became reportable in 2009.
- **122 Cities Mortality Reporting System (Vital Statistics):** Ohio's eight largest cities participate in this reporting on a weekly basis. Vital statistics offices from across the country report the number of death certificates received, along with how many of those have pneumonia or influenza listed as an underlying or contributing cause of death.
- **Influenza-associated Pediatric Mortality (ODRS):** Influenza-associated pediatric mortalities are reported into ODRS by local health department and hospital staff. Pediatric deaths can be an indicator of the severity of illness during the influenza season. This condition became reportable in 2005.
- **National Respiratory and Enteric Virus Surveillance System (NREVSS):** The National Respiratory and Enteric Virus Surveillance System (NREVSS) is a laboratory-based system that monitors temporal and geographic patterns associated with the detection of respiratory syncytial virus (RSV), human parainfluenza viruses (HPIV), respiratory and enteric adenoviruses and rotavirus. There are 19 facilities in Ohio that submit data to this system.
- **athenahealth®:** athenahealth is a technology and services company for medical billing and electronic health records. Diagnosis and procedure data from primary care visits are automatically queried to produce influenza related statistics.
