

Q10: During the past 30 days, how many times did you ride in a car or other vehicle driven by someone who had been drinking alcohol?

In 2005, most students reported that they do not ride with drivers who have been drinking.

- 21.3 percent of students reported that in the last 30 days they rode with a driver who had been drinking alcohol.
- There were no significant differences in riding with a driver who had been drinking alcohol by gender, grade level or race.

Significantly fewer students reported riding with a driver who had been drinking alcohol in 2005 (21.3 percent) than in 1999 (32 percent).

- When compared to 1999, significant decreases were observed in 2005 for both males and females, as well as students in the ninth and 10th grades.
- There were no significant difference between 2003 and 2005.
