

**Utilization levels.**

- (A) Each solid organ transplant service, including combined adult and pediatric transplants performed in a single hospital or university multi-hospital transplant service, should achieve the following volume goals per year after they have been in existence for two years or more to ensure efficiency and a minimum floor of competency:
  - (1) For kidney, fifteen transplants;
  - (2) For heart, ten transplants;
  - (3) For liver, ten transplants; and
  - (4) For lung, ten transplants.
- (B) Volume goals will be considered by the director in conjunction with other indicators of quality, not as the sole indicator of service performance.
- (C) Failure to meet a volume goal for two consecutive years will trigger an extended review of the solid organ transplant service including possible inspections by the director of health. The director may request a statewide consortium of solid organ transplant services to conduct the inspections for solid organ transplant services.
