

**Syndromic Surveillance Technical Specifications for  
Facility Data Transmissions**

**Version 2.0**

**Last modified on May 22, 2018**

## Introduction

The U.S. Department of Health and Human Services administers federal incentive programs for eligible hospitals (EHs), critical access hospitals (CAHs), eligible providers (EPs), and eligible clinicians (ECs) that have adopted and use certified electronic health record technology (CEHRT). The transmission of syndromic surveillance messages from health care providers to a public health agency using CEHRT is one of the measures available to incentive program participants. Due to changes in national standards that are part of these incentive programs, the Ohio Department of Health (ODH) has expanded the fields of data collected since establishing a Syndromic Surveillance program in 2003. These changes have improved the data that public health agencies in Ohio use for detecting, tracking and characterizing health events.

The technical specifications included in this document have been informed by the following federal Final Rules:

- [Medicare Program; Merit-Based Incentive Payment System \(MIPS\) and Alternative Payment Model \(APM\) Incentive Under the Physician Fee Schedule, and Criteria for Physician-Focused Payment Models](#)
- [Medicare and Medicaid Programs; Electronic Health Record Incentive Program-Stage 3 and Modifications to Meaningful Use in 2015 Through 2017](#)
- [2015 Edition Health Information Technology \(Health IT\) Certification Criteria, 2015 Edition Base Electronic Health Record \(EHR\) Definition, and ONC Health IT Certification Program Modifications](#)

Ohio's technical specifications are also consistent with the following Public Health Information Network (PHIN) messaging guides for syndromic surveillance:

- [PHIN Messaging Guide for Syndromic Surveillance: Emergency Department, Urgent Care, Inpatient and Ambulatory Care Settings, Release 2.0 \(April, 2015\)](#)
- [Erratum to the PHIN Messaging Guide for Syndromic Surveillance: Emergency Department, Urgent Care, Inpatient and Ambulatory Care Settings ADT Messages A01, A03, A04 and A08 Optional ORU^R01 Message Notation for Laboratory Data HL7 Version 2.5.1 \(Version 2.3.1 Compatible\) Release 2.0 April 21, 2015](#)

or outlined in the [Health Level Seven \(HL7\) messaging standards 2.5.1](#) (creation of an account is necessary to download).

Information about state-specific eligibility requirements can be found on the ODH's Syndromic Surveillance policy webpage: <https://www.odh.ohio.gov/healthstats/HIT/Sys.aspx>.

A major change for Stage 3 occurred in the October 2015 Final Rule: Only EHs, CAHs, and EPs/ECs at urgent care centers are eligible to take the syndromic surveillance measure.

Enrollment and registration to submit data for public health measures managed by ODH can be completed by going to the Ohio Public Health Reporting (OPHR) web application: <http://ohiopublichealthreporting.info>. Encounters that occur at a facility within the state of Ohio are eligible per federal Final Rules. Contacts for facilities or healthcare systems should be kept current on the OPHR website by the Meaningful Use (MU) primary contact for syndromic surveillance.

## Security and Data Transmission of Syndromic Surveillance Messages

Syndromic surveillance messages are derived from data stored in CEHRT systems. CEHRT systems, syndromic surveillance messages, and syndromic surveillance systems contain protected health information (PHI). System owners, users of these systems, and transmitters of PHI containing messages must secure the collected information to adhere to federal, state, and local (as applicable) rules regarding PHI.

ODH requests only the minimum PHI necessary to accomplish the purposes of Syndromic Surveillance for public health (see appendices B through F for standards and fields or components to transmit). The CEHRT systems and ODH's vendor strive to keep the information secure with security and privacy requirements. Submitting facilities are responsible for ensuring only the requested information is being sent to ODH's vendor. The vendor or ODH will contact you should they find messages that include identifying protected health information that is not formally requested in this document. Named individuals or address information (with the exception of state, zip code, country, address type, and county/parish code) will not be transmitted. A list of excluded PHI fields can be found in appendix F (suppressed fields).

ODH's vendor has implemented a number of secure data transmission formats. These secure methods include MLLP, SFTP, FTPS, and FTP over a VPN. A secure method of transmission is a requirement for the submission of data.

Encryption is necessary for the patient identifier and the visit number fields submitted. Should there be a public health event or inquiry from local health departments, the submitting facility may need to decode the encrypted patient identifier and visit numbers. In practice, the individuals involved with responding to public health inquiries (someone other than the CEHRT interface technician) should be able to complete this task quickly (a single patient or a list of encounters covering multiple days). If encrypting these two fields is not possible, please contact ODH's vendor to discuss their ability to encrypt these fields.

## Data Standards

The federal Final Rules require syndromic surveillance messages to be sent using the HL7 messaging standards 2.5.1. ODH's vendor can accept a number of HL7 message formats (2.1, 2.2, 2.3, 2.3.1, 2.4, 2.5, 2.5.1, and 2.6), but the current standard for incentive payments is version 2.5.1.

Typical syndromic surveillance HL7 message types include the message code and trigger event components of ADT^A01, ADT^A03, ADT^A04, and ADT^A08. The encrypted patient identifier and visit number should remain unchanged when submitting these messages. Internal processes may terminate the patient from the CEHRT system (e.g., ADT^A13 "Cancel Discharge / End Visit", ADT^A23 "Delete a Patient Record", ADT^A29 "Delete Person Information"). If these or other message types are being used by your facility, please communicate this information with ODH's vendor and await instructions. The information provided assists with properly classifying encounters into syndrome, symptom, or custom categories. The completeness of these fields (e.g., free-text chief complaint, discharge diagnoses, residential zip code, patient age, patient race) provides ODH with classification information that will

improve anomaly detection or descriptive information that will summarize characteristics of an identified cluster.

### **Process of Onboarding and Subsequent Testing**

ODH will invite new facilities to onboard with its vendor. At the time of notification for onboarding, the facility will be provided a unique identifier for *only* the prescribed facility's encounters. This code should not be used for other facilities within its healthcare network. The testing phase will take anywhere from a week to months, depending on the timeliness, identification and correction of errors, volume of test messages from the submitters, and to account for available staffing (*e.g.*, ODH's vendor, facility interface staff, CEHRT product staff), especially during the summer months and holidays. After moving into production with ODH's vendor, public health will be able to see data for their first time from the submitting facility/facilities. Production data and test data rarely match examples, so some additional post-production changes may be requested either by public health or by ODH's vendor.

Established facilities that have new facilities to onboard *shall not* add to their established data feed to ODH's vendor to submit additional encounters. Each facility will be provided their own identifier so that when there is a health event, public health will be able to quickly distinguish where the issue is located.

Testing in advance of CEHRT system upgrades should occur with ODH's vendor, regardless of whether or not the CEHRT upgrade is expected to impact the creation or data within the fields for syndromic surveillance messages. Please provide as much advance notice to ODH's vendor as possible to assure adequate time and staffing availability. Testing for upgrades can occur in parallel with ongoing production data submission.

ODH's vendor may request additional testing at any time. This may be due to changes of the data being submitted to the vendor, an oversight, or a shift to the data standards in place. As previously mentioned above, submission of unwanted PHI may warrant additional testing. The ODH encourages the resolution of these data issues as quickly as possible.

ODH provides surveillance on data available every hour. Therefore, we encourage the use of near real-time reporting of encounters. For those submitting for Modified Stage 2, the submission standard is at least once every 24 hours. Those submitting for Stage 3, the PHIN Messaging Guide for Syndromic Surveillance: ED/UC, Inpatient and Ambulatory Care Settings state (page 23, Table 2-1):

“...data must be submitted at least within 24 hours of the date and time of the patient's initial encounter. Any subsequent updates to a patient's record must also be submitted within 24 hours of the information (transaction) being added to the patient record. Real time data transmission, or very frequent batch data transmission, is preferred. If batch transmission mode is utilized, batches must be transmitted at least once every 6 hours.”

Public health events and situation monitoring could occur at any time. The goal is to keep data up to date so decisions can be made quickly by public health and its stakeholders. Ideally, downtime events should be kept to a minimum. Any messages during downtime events should be sent as soon as possible after the downtime, with the exception of very large volume of downtime messages. If the volume of messages is high, please coordinate the batch transmission of messages with ODH's vendor. Detection

of unusual events are more easily captured when all locations are reporting timely encounters. Therefore, ODH understands unexpected downtimes will occur, but encourages quick responses and complete reporting. For planned, special monitoring events (*e.g.*, the Republican National Convention, 2016), it would not be unusual for the ODH to request a delay in routine updates to the CEHRT system or the hardware where it resides during or immediately before the special monitoring event.

### **Data Fields, Components, and Concept Codes to Submit**

There are fields that the ODH requires for submission (denoted “R” or “RE”) and those that are optional (“O”). See [appendix A](#) for Foundational References of Usage, Data Types, and Segment Usage that cover these and other specified values. [Appendix B](#) is a complete table of fields and components, [appendix C](#) includes additional syndromic surveillance OBX segments concept codes, [appendices D](#) and [E](#) for field and component locations (respectively), and [appendix F](#) for suppressed fields.

While required fields, components, and concept codes are important to submit, there are two frequently requested free-text concepts codes that allows for ODH’s syndromic surveillance system to perform at a high level. These two fields are the chief complaint and the triage note. A self-reported, free-text chief complaint with all stated symptoms is required. This is different than the provider’s reason (*e.g.*, triage nurse, physician, registered nurse), which has its own field. Should a major health event occur, public health will look to this completed concept code first. If both the free text chief complaint text and drop down selection chief complaint text are available, send both. The chief complaint text should not be replaced with other information either manually or by the data provider’s system. The chief complaint should remain unchanged as it was captured at time of admission. A corollary field to the chief complaint is the triage note. The information in the triage note may identify possible common sources and/or date(s) of exposure, provides history of medical care up to that assessment (*e.g.*, “Narcan administered”), supports or refutes the patient’s chief complaint information faster than final diagnoses are provided (*e.g.*, “patient not in room when envelope with white powder was opened”), assists with identifying clusters with keywords provided (*e.g.*, mass casualties), and may decrease the need of public health contacting the facility for timely, additional information for determining an appropriate response. If you have any questions about these two concept codes, please do not hesitate to contact the Syndromic Surveillance program.

### **Errata**

When identified, errors will be corrected within the document and published with version and last modified date updates.

### **ODH Point of Contact**

Richard Thomas, MPH  
Information Systems Policy Specialist  
Bureau of Infectious Diseases

Ohio Department of Health  
246 North High Street  
Columbus, Ohio 43215

Telephone: (614) 728-9185  
E-mail: [richard.thomas@odh.ohio.gov](mailto:richard.thomas@odh.ohio.gov)

**Appendix A: Foundational References of Usage, Data Types, and Segment Usage**

**Usage Table of Assigned Values for Ohio**

Value	Definition
R	Required. Must always be populated.
RE	Required, but may be empty. If the sender has the data, it must be sent. The Ohio Department of Health (ODH) or ODH’s vendor must be capable of processing data if sent (quality data sent).
C	Conditionally required
CE	Conditionally required, but may be empty. ODH or ODH’s vendor must be capable of processing data if sent (quality data sent).
X	Not supported
O	Optional

**Notations on optional or repetitions**

Segments, fields, or components included in brackets (‘[ ]’) are considered optional. For example, if provided with the following date time field:

‘YYYYMMDDHHMM[SS[.S[S[S[S]]]]] [+/- ZZZZ]’

you will be required to submit at least ‘YYYYMMDDHHMM’. The remaining seconds and fractions of a second are optional. Time-zone (‘[+/- ZZZZ]’) is also optional, however, if the treating facility, submitting facility, submitting entity (e.g., certified electronic health record technology vendor), or the Ohio Department of Health are located in time-zones, please submit time zones on all date/time fields for clarity.

Segments, fields, or components included in ‘curly’ braces (‘{ }’) are permitted to have repetitions. Examples include OBX segments, PID-10 (patient’s race), and admit reason.

**Segment Usage Requirements for A01, A03, A04, and A08 Message Types**

Segment and Order	Usage for A01, A04, and A08 Message Types	Usage for A03
MSH	R	R
EVN	R	R
PID	R	R
PV1	R	R
PV2	RE	RE
OBX	R	
DG1	RE	RE
PR1	O	O
OBX (order changed for A03 messages)		RE
IN1	O	O

There are multiple “Data Types” per [Health Level Seven \(HL7\) messaging standards 2.5.1](#). Please use the HL7 source as the reference for definitions unless otherwise stated in the following appendices.

**Appendix B: Syndromic Surveillance Health Level Seven (HL7) 2.5.1 Segments, Fields, and Components<sup>†</sup>**

<sup>†</sup> Tables derived from a combination of [PHIN Messaging Guide for Syndromic Surveillance: Emergency Department, Urgent Care, Inpatient and Ambulatory Care Settings, Release 2.0](#), [Erratum to the PHIN Messaging Guide for Syndromic Surveillance: Emergency Department, Urgent Care, Inpatient and Ambulatory Care Settings ADT Messages A01, A03, A04 and A08 Optional ORU^R01 Message Notation for Laboratory Data HL7 Version 2.5.1 \(Version 2.3.1 Compatible\) Release 2.0](#), and [Health Level Seven \(HL7\) messaging standards 2.5.1](#)

**MSH Segment fields**

MSH Field / component order	Field name	Data type	Length	Comment	ODH Modified S2 Usage	ODH S3 Usage
1	Field Separator	ST	1	The field separator is the bar (“ ”). Conformance Statement SS-043: MSH-1 (Field Separator) <b>SHALL</b> be the literal value: ‘ ’, (ASCII 124)	R	R
2	Encoding Characters	ST	4	The component separator (“^”), repetition separator (“~”), escape character (“\”), and subcomponent separator (“&”), respectively, are listed in this field.  Conformance Statement SS-044: MSH-2 (Encoding Characters) <b>SHALL</b> be the literal value: ‘^~\&’, (ASCII 94, 126, 92, and 38, respectively).	R	R
3	Sending application	HD	227	User defined sending application among all of the certified electronic health record technology components.	O	O
4	Sending facility	HD	227	<b>ODH has been utilizing MSH-4 as the unique field to identify event/encounter location facilities. There may be a transition during CEHRT version upgrades to duplicate or move this value to EVN-7 to re-align to HL7 2.5.1 standards.</b>  For other jurisdictions, this field may contain a National Provider Identifier (NPI; NPI search: <a href="https://npiregistry.cms.hhs.gov/">https://npiregistry.cms.hhs.gov/</a> ). DG1 Field / component order	Field name	Data type	Length	Comment	ODH Modified S2 Usage	ODH S3 Usage
				<p>If submitting ICD-10-CM codes, please include V, W, X, Y, Z, and select T codes. Please send all codes, including injury related codes that are available in the EHR. Each diagnosis code provided should have a text value (which may provide an enhanced diagnosis over a general category; DG1-3.2), the diagnosis code set it is derived from (DG1-3.3), and a diagnosis type (DG1-6). If the EHR diagnosis is only matched on names, additional work should be conducted to assure the correct coding (<i>e.g.</i>, influenza A diagnoses should not be matched with only pandemic strain final diagnoses). Diagnoses could be provided in repeats in DG1-3, but more often are provided with repeat DG1 segments. Diagnoses should be sent on a regular basis. Final discharge diagnosis sets should be provided as soon as possible.</p> <p><b>This field can accept repetitious values from a code set; multiple codes may be sent. The first diagnosis code should be the primary diagnosis, whenever possible. Alternatively, please use the order or significance in DG1-15 (primary=1, secondary=2, etc.) with separate DG1 segments with each diagnosis code.</b></p> <p>Condition Predicate: If the DG1 Segment is provided, DG1-3 (Diagnosis) is required to be valued.</p> <p>While field standards suggest a length of 478, the CE data type length has a maximum length of 483.</p>		
3.1	[Diagnosis code] Identifier	ST	20	<p>Valid codes come from one of the following sets:</p> <p><u><a href="https://phinvads.cdc.gov/vads/ViewValueSet.action?oid=2.16.840.1.114222.4.11.7356">ICD-10-CM: PHVS_AdministrativeDiagnosis_CDC_ICD-10CM https://phinvads.cdc.gov/vads/ViewValueSet.action?oid=2.16.840.1.114222.4.11.7356,</a></u></p>	R	R

8661-1	Chief complaint:Find:Pt:Patient:Nom:Reported	Chief complaint	<p><b>For ODH, a self-reported, free-text field with <u>all</u> stated symptoms is required. ODH’s syndromic surveillance system performs best with free-text data and multiple symptoms provided. Should a major health event occur, public health will look to this completed concept code first.</b></p> <p>This field is the patient’s <b>self-reported</b> chief complaint or reason for visit. It is distinct from the Admit Reason (PV2-3) field which is the <b>provider’s reason</b> for admitting the patient. Senders should send the most complete description of the patient’s chief complaint. In some cases, this may entail sending multiple chief complaint values. If both the free text chief complaint text and drop down selection chief complaint text are available, send both. Some systems may automatically overwrite chief complaint with final diagnosis when the final diagnosis code is assigned. <b><u>The chief complaint text should NOT be replaced with other information either manually or by the data provider’s system.</u></b> Keep the chief complaint the same as how it was captured at time of admission.</p> <p>Please be aware there was a conflict of data types provided in the PHIN messaging guide version 1.9 for syndromic surveillance. It lists both Conformance Statements SS-005 and SS-006, which lists two different data types. ODH is requesting the use of TX for the chief complaint (OBX-3), which is carried forward and allows for a longer stated chief complaint.</p> <p><u>Literal values:</u>                      OBX-2: ‘TX’                      OBX-3: ‘8661-1^CHIEF COMPLAINT – REPORTED^LN’                       OBX-5: Stated chief complaint</p>	RE	RE

Concept Code (OBX-3.1)	Concept Name	Preferred Concept Name	Notes	ODH Modified S2 Usage	ODH S3 Usage
			<p>Conformance Statement SS-005: The patient’s chief complaint <b>SHALL</b> be captured only as an unstructured, free-text note, valued in OBX- 5 [data type], TX [in OBX-3][<del>1</del>]. This method includes chief complaint captured from a coding system or captured as a structured field in the source system.</p> <p><u>Example shell:</u>                      OBX 1 TX 8661-1^CHIEF COMPLAINT – REPORTED^LN  &lt;OBX-5 Stated chief complaint value&gt;   &lt;OBX-11 Observation result status value&gt;  &lt;OBX-14 Date/time of the observation value&gt;</p>		
44833-2	Diagnosis.preliminary:Imp:Pt:Patient:Nom:	Clinical Impression/Preliminary Diagnosis	<p>A stated clinical impression may provide similar value to the <a href="#">(clinical admit reason (PV2-3.2))</a>. A free-text value may have a greater value over a single coded value (ICD-10-CM, SNOMED-CT® codes) if it is well defined.</p> <p>The LOINC code is listed as “preliminary diagnosis”.</p> <p><u>Literal values:</u>                      OBX-2: ‘TX’                      OBX-3: ‘44833- 2^PRELIMINARY DIAGNOSIS^LN’</p> <p>OBX-5: Stated clinical impression or preliminary diagnosis (free text)</p> <p><u>Example shell:</u>                      OBX 1 TX 44833- 2^PRELIMINARY DIAGNOSIS^LN  &lt;OBX-5 Stated clinical impression (free text) value&gt;   &lt;OBX-11 Observation result status value&gt;  &lt;OBX-14 Date/time of the observation value&gt;</p>	0	0
8462-4	Diastolic Blood Pressure	Diastolic Blood Pressure	<p>Blood pressures are usually verbally (and on paper) reported with both the systolic and diastolic pressures. For syndromic surveillance, they are reported separately. Diastolic pressures are typically the lower values than</p>	0	0

**Appendix F: Suppressed Fields**

Fields or Components Specifically to Exclude / Suppress for Syndromic Surveillance  
Messages to the Ohio Department of Health

<b>HL7 Segment/Field/Subcomponent</b>	<b>HL7 Description</b>
PID-5.1 through PID-5.6, PID-5.8 through PID-5.14	Patient name, with the exception of Name Type (to ensure anonymity)
PID-6	Mother’s Maiden Name
PID-9	Patient Alias
PID-11.1, PID-11.2, and PID-11.8	Patient Street Address, Other Designation subcomponents, Other Geographic Designation
PID-13 through PID-17	Home and Business Phone Numbers, Primary Language, Marital Status, Religion
PID-19 through PID-21	SSN, Driver’s License Number, Mother’s Identifier
PID-23 through PID-28	Birth Place, Multiple Birth Indicator, Birth Order, Citizenship, Veterans Military Status, Nationality
NK Segment	Next of Kin Segments
MRG-7	Prior Patient Name
IN1-16	Name of Insured
IN1-19	Address of Insured
GT1 Segment	Guarantor segment

Fields that are not supported (marked only as data type = ‘X’ and conditionally not supported (C(R/X))) may also be suppressed.
