

<b>Hepatitis C Case Classifications</b>				
<b>Case Status</b>	<b>Symptoms</b>	<b>Jaundice OR ALT &gt; 200 IU/L</b>	<b>Anti-HCV (qualitative or quantitative)</b>	<b>NAT for HCV RNA (qualitative, quantitative, or genotype testing)</b>
<b>Acute*</b>				
Confirmed	X	X	(+) or (-) or not done	(+)
Probable**	X	X	(+) or >1.0 s/co	
Suspected†	X	X	(+) prior to 2016 and (+) ≥2016	
Not A Case	X	X	(+) or (-) or not done	(-)
*A documented negative HCV antibody laboratory test result followed within 12 months by a positive test result does not require an acute clinical presentation to meet the surveillance case definition.				
<b>Chronic</b>				
Confirmed			(+) or (-) or not done	(+)
Probable**			(+) or >1.0 s/co	
Suspected†			(+) prior to 2016 and (+) ≥2016	
Not A Case			(+) or (-) or not done	(-)

\*\*New probable cases cannot have previously reported laboratory tests.

† For a case that was previously reported as suspected and new labs are reported, the case can only be confirmed as chronic if case definition is met.

#### **Terms and symbols used in this table:**

(-) = A negative test result

(+) = A positive test result

ALT= Alanine Aminotransferase Test

**Symptoms** = Fever, headache, malaise, anorexia, nausea, vomiting, diarrhea, and abdominal pain
