Mom's name

Mom's address

Dear (Mom's Name),

Congratulations! Your child, Baby's Name, has finished his/her hepatitis B shots.

I am writing to tell what needs to be done to make sure your baby has been protected from hepatitis B, and that no more hepatitis B shots are needed at this time.

A blood test is needed when your baby is about one year old. This test will tell us he/she does not have hepatitis B and is protected from Hepatitis B. These tests are called the Hepatitis B surface antigen (HBsAg) and the Hepatitis B surface antibody (anti-HBs).

Please take this letter to your baby's doctor so the blood test can be done.

Please call me if you have any questions, at (XXX-XXX-XXXX)

Sincerely,

Your name, RN, PHN
