RE: RUG IV Hierarchical Provider Frequency Distribution Report

Ohio Department of Medicaid (ODM) is in the process of moving to RUGs IV for the Medicaid resident classification system. However, at this time, it is uncertain which model Ohio will use: 48 groups, 57 groups or 66 groups. At this time, ODM is providing the RUG IV Hierarchical Provider Frequency Distribution Report for quarter ending June 30, 2015 so all facilities can see what effect RUGs IV will have on the classification of your residents.

For each of the 3 models, the column headings are as follows:

- Tot Freq – total number of residents in each group, regardless of payer.
- Tot Perc – percent of all residents that fall into a group
- MCAID Freq – number of Medicaid residents in each group
- MCAID Perc – percent of Medicaid residents that fall into a group
- MCAID EXCL PA Freq - number of Medicaid residents in each group excluding those that grouped in PA1 or PA2
- MCAID Excl PA Perc - percent of Medicaid residents that fall into a group excluding those that grouped in PA1 or PA2

ODM will provide further information on RUGs IV once it is finalized.

**Note:** We had to change the file names to Quarterly Filenames due to File restrictions for transfer from HP to Provider Mailboxes.
