## Ohio Public Water System Fluoride Levels, 2012

<u>PWS ID</u>	<u>Water System</u>	<u>Population Served</u>	<u>Fluoridation Status</u>	<u>Fluoride Level</u>	<u>Purchase From ID</u>	<u>Purchase From Name</u>
OH5300012	Leading Creek Conservancy District <sup>^</sup>	6,194	Deficient			
OH5300112	Middleport Village PWS	2,975	Deficient	0.20	OH5300212	Pomeroy Village PWS
OH5300212	Pomeroy Village PWS	2,900	Deficient	<0.50		
OH5300312	Racine Village PWS	920	Deficient	0.50		
OH5300403	Rutland Village PWS	469	Purchase		OH5300012	Leading Creek Conservancy District
OH5300512	Syracuse Village PWS	879	Deficient	0.17	OH5300212	Pomeroy Village PWS
OH5300612	Tupper Plains/Chester Water District	15,602	Adjusted			

<sup>^</sup> Leading Creek has taken steps to begin adjusting fluoride levels, but technical problems have delayed implementation

### How to use this table:

Fluoridation Status: **Adjusted:** The natural fluoride level is adjusted to the optimum level for good dental health. [Click](#) for information about optimum fluoride levels.  
**Deficient:** The natural fluoride level is below the optimum level for good dental health.  
**Natural:** The fluoride level is naturally at optimum or higher levels.  
**Purchase:** The water system purchases optimally fluoridated water from another public water system.

Fluoride Level: The fluoride level is provided for systems that do not adjust or purchase. Fluoride concentration is measured in parts per million (ppm) or milligrams per liter (mg/L).

Purchase From: The PWS ID indicated can be traced back to the original source of purchased water. The first two letters identify the state. The first two digits of the PWS ID identify the county in alphabetical order ([click](#) for a list of Ohio counties by code). The last five digits identify the system.

### Please Note:

\*Some water systems have fluoride levels tested at commercial labs that report levels of fluoride that are less than 0.5 ppm as "<0.5ppm." This is NOT specific enough for purposes of prescribing fluoride supplements. Health professionals should contact their local water plant in order to obtain more specific information on low fluoride levels.

\*\*Public water systems comprise only a proportion of water systems that serve a county population. Some areas are served by non-community water systems.

*The fluoride levels in the drinking water provided by public water systems which do not add supplemental fluoride are assumed to be the same as the natural fluoride content of the source water since typical water treatment or storage processes are not expected to remove fluoride.*
