

PERSONNEL MONITORING

The National Bureau of Standards has accredited 35 personnel dosimetry processors under the National Voluntary Laboratory Accreditation Program. Seven of these processors which offer personnel dosimetry services on a commercial basis have requested to be put on a list for distribution to the public upon request. The personnel dosimetry devices provided are commonly called "film badges," although some processors no longer use film as the detection media. The processors not only furnish the badge but also process them after they have been used by the customer. After processing, a report is furnished to the customer which states the quantity of radiation received by the badge and, in some cases, the type of radiation received by the badge. Each processor should be contacted directly for their list of charges and services available. This list does not signify endorsement by the Ohio Department of Health.
